DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 6-9, 12,15, 18, 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Barabi et al.

With regard to claim 6, 12, 18 Barabi et al (US 6,220,870) disclose a needle-like member that constitutes a conductive contact which electrically connects a first object (15) to a second object (col. 1, lines 19-21), the needle-like member comprising:

- a columnar member (95) having a first end and a second end;
- a through hole that connects the first end to the second end; and
- a contact member (79) configured to electrically contact with the first object and arranged

at the first end.

Art Unit: 2833

With regard to claims 7, 8, Barabi et al disclose that the second object is a circuit board (col. 1, lines 19-21) that includes a circuit for generating and transmitting an electrical signal to be supplied to the first object.

With regard to claim 9, 15, 21, Barabi et al disclose that the through hole has a constant diameter.

Claims 6, 10-14, 16-20, 22 are rejected under 35 U.S.C. 102(e) as being anticipated by Tate et al.

With regard to claim 6, Tate (US 6,861,862) disclose a needle-like member that constitutes a conductive contact which electrically connects a first object (21) to a second object (13), the needle-like member comprising:

a columnar member(25) having a first end and a second end;
a through hole that connects the first end to the second end; and

a contact member (17) configured to electrically contact with the first object and arranged

at the first end;

a second needle-like member (91).

With regard to claim 10, Tate discloses that the through hole tapers (36, 40) from the first end toward the second end.

Art Unit: 2833

With regard to claim 11, Tate discloses that the contact member (17) is located near a periphery of the columnar member in a longitudinal direction to come in contact with a periphery of a connecting electrode of the first object.

With regard to claim 12, Tate discloses conductive contact that electrically connects a first object to a second object, the conductive contact comprising:

a first needle-like member that includes a columnar member (14) having

a first end and a second end;

a through hole (36) that connects the first end to the second end; and

a contact member (17) configured to electrically contact with the first object and arranged at the first end; and

a second needle-like member (20) that is arranged to electrically connect to the first needle-like member, and slides in the through hole of the first needle-like member; and

a spring member (23) that is fixed to the first needle-like member, and applies an elastic force on the second needle-like member present in the through hole.

With regard to claims 13, 14, Tate discloses that the second object (13)

is a circuit that generates and transmits an electrical signal to be supplied to the first object.

With regard to claim 16, Tate discloses that the through hole (36, 40)

tapers from the first end toward the second end.

Art Unit: 2833

With regard to claim 17, Tate discloses that the second needle\- like member includes a support member (24, 30) that is slidable in the longitudinal direction while being in contact with an inner surface of the through hole; and a contact member (20) that is integrally formed with the support member, and configured to electrically contact with the second object.

With regard to claim 18, Tate discloses conductive contact unit comprising:

a conductive contact including

a needle-like member that includes a columnar member (14) having a first end and a second end, a through hole that connects the first end to the second end, and a contact member (17) configured to electrically contact with an object; and

a spring member (22) that biases the needle-like member in a direction perpendicular to the object; and

a conductive contact holder (15) that includes a holder hole for accommodating the conductive contact.

With regard to claims 19, 20, Tate discloses a circuit (13) that generates and transmits an electrical signal to be supplied to the first object.

With regard to claim 22, Tate discloses that the through hole (36, 40) tapers from the first end toward the second end.

Art Unit: 2833

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alexander D. Gilman whose telephone number is 571 272-2004. The examiner can normally be reached on Monday-Friday, 10:30 a.m. - 8:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paula A. Bradley can be reached on 571 272-2800 ext. 33. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

7/16/2007
